

Supplement 4: Standardized conclusion phrases for the results of the penicillin challenge

(remove the unfitting text and fill in the missing information)

The patients penicillin allergy labelling has been examined, and the patient underwent an uneventful oral challenge with *(replace with name of penicillin)*. The patient has no penicillin allergy, all drug allergy labelling in the hospital and national core journal has been corrected. We ask you as the patients GP to update your local patient journal accordingly.

OR:

The patient underwent a penicillin challenge with *(replace with name of penicillin)* and developed a late/immediate reaction.

The reaction was described as.....

The patient has a confirmed penicillin allergy, all drug allergy labelling in the hospital and national core journal has been corrected. We ask you as the patients GP to update your local patient journal accordingly. The patient will be referred to an allergology department for further evaluation.
